

FACTS ABOUT GUMMI KING™ VITAMINS

RECYCLING

Gummi King™ believes that recycling is an important part of taking care of our planet and making sure it is around for others to enjoy in the future. There are many things we can all do to care for our planet, our air and our oceans and recycling is one that each and every one of us can do each and every day.

Many of the materials we use everyday can be reused and recycled. This includes plastic containers, which means that after processing, they can be used in the as raw materials to manufacture new products, instead of sitting in a landfill, as waste, for thousands of years.

There are so many reasons to recycle including saving natural resources and saving landfill space, reducing pollution and saving energy.

For example a lot of countries producing pulp fiber do not have planted forests and utilize native timbers. Recycling reduces and in some cases removes this pressure on native and exotic timbers.

Landfills are under pressure from increases in waste and whilst some are of the opinion we have plenty of land to spare, the environmental requirements of these sites means that in fact there are limited places to put them.

In a lifetime, the average American will throw away 600 times his or her adult weight in garbage. This means that each adult will leave a legacy of 90,000 pounds of trash for his or her children.

Recycling all of your home's waste newsprint, cardboard, glass, and metal can reduce carbon dioxide emissions by 850 pounds a year.

Each of us generates on average 4.4 pounds of waste per day per person.

Enough energy is saved by recycling one aluminum can to run a TV set for three hours or to light one 100 watt bulb for 20 hours.

Americans throw away enough aluminum every three months to rebuild our entire commercial air fleet.

Annually, enough energy is saved by recycling steel to supply Los Angeles with electricity for almost 10 years.

You can make 20 cans out of recycled material with same amount of energy it takes to make one new one.

Five recycled plastic bottles make enough fiberfill to stuff a ski jacket. (Maybe that's why Gummi King™ likes to ski!)

In this decade, it is projected that Americans will throw away over 1 million tons of aluminum cans and foil, more than 11 million tons of glass bottles and jars, over 4 and a half million tons of office paper nearly 10 million tons of newspaper. Almost all of this material could be recycled.

Incinerating 10,000 tons of waste creates 1 job, land filling the same amount creates 6 jobs, recycling the same 10,000 tons creates 36 jobs.
