

FACTS ABOUT GUMMI KING™ VITAMINS

Gelatin Vs. Pectin

Gelatin is a translucent solid substance created from animal by-products. Pectin, on the other hand, is a natural fiber derived from fruits. Pectin forms a gel that helps give our vitamins their soft chewy consistency—as opposed to gelatin-based gummi vitamins that are neither soft nor chewy.

While pectin provides taste and nutritional benefits, it is also trickier to work with. Gummi King™ has found a way to make Gummi King™ vitamins as tasty as they are healthy!

This is important for your kids' health and your peace of mind.

Gummi KING™
